

Trough Lighting

Trough Lighting

The trough lighting from Lightsign is a specifically designed product that is used for external fascia lighting. It is an epoxy powder coated extruded aluminium with press formed end caps and a perspex front. The fitting consists of an IP rated LED light engine with a power consumption of 15 watts per metre. The standard length is up to 6 metres but our trough and can be cut to any size or extended using an internal coupler.

The trough comes complete with wall mounting brackets and an extension cut to a standard size of 150mm. The angle of the trough can be adjusted using one of seven different positions. It has a diameter of 78mm. It is super bright and energy efficient.

Power Supply	24 volt
Power Consumption	15 watts
